Allowable Subject Matter

1.0 The present invention is directed to a device which provided for compression of voice and data packets into an aggregated packet between two gateways. The device also provides for error correction of packets as well as channel state synchronization between the two gateways.

The closest prior art is Goldberg (U.S. Patent No.; 6,574,218) and Cooklev (U.S. Patent No.: 6,574,218 B1). Goldberg teaches a method for reducing overhead or latency associated with VoIP between two gateways. Goldberg compresses voice and/or data streams into a single Super Packet. Goldberg fails to teach "synchronization of channel state between the two gateways". Cooklev teaches regenerating missing or damaged packets.

The closest prior art does not either singularly or in combination disclose, anticipate, or render obvious the following claim limitations:

"synchronizes a current channel state at the originating gateway with a record of said channel state at the destination gateway" as claimed in claim 1, 6, or 12.

In addition:

Claims 2-4, 18-20, & 23 are allowable because they depend upon claim 1.

Claims 7-9, 21-22, & 24-25 are allowable because they depend upon claim 6.

Claims 13-15 & 26-27 are allowable because they depend upon claim 12.
